ADDISON, Texas – Mitsubishi Heavy Industries America (MHIA) Aircraft Product Support Division has received FAA approval of a new Angle of Attack (AOA) system for **MU-2 aircraft**.

The Angle of Attack system was developed in cooperation with **Alpha Systems AOA**.

For the MU-2 turboprop installation, **Alpha Systems** customized its standard **AOA System** to incorporate all MU-2 flap settings.

“In cooperation with MHIA, we developed an **AOA system** that factors flap inputs into our standard pressurized-aircraft AOA configuration,” said Mark Korin, CEO of **Alpha Systems** of Ramsey, Minn. “This system will provide visual and audio indications of angle of attack for all approach and departure phases of flight.”

Installation kits, available from the MU-2 Parts Center, include all necessary components to be installed on an MU-2.
